PressureSurface Underlay

This memory foam underlay is designed to provide “bottoming out” protection for alternating pressure overlays, while still minimising the height of the overall support system on the bed.

Constructed from medium density long wearing foam, the underlay fits underneath an alternating pressure mattress system for added protection and support in the event of a system failure. Foam is covered by an inner cotton cover for added protection.

The polyurethane top cover features multi-stretch material for reduced shear and friction. With waterfall skirt to provide protection from moisture ingress, seams are stitched for strength, then welded or tape sealed for maximum infection control. A PVC slip-resistant base helps maintain product position on bed. The cover is also pre treated for protection against dust mites, mould, mildew and bacteria and includes an asset management panel for recording facility details.
